Pneumatic breakers, chipping hammers and rock drills

Attaining Sustainable Productivity...

Advanced Technology

Atlas Copco breakers are a dramatic leap ahead in technology. They are constructed from a one-piece, solid-cast housing eliminating frontheads, four-bolt backheads and sidebolts.

Easy to service

The TEX series has been designed for fast and exceptionally easy on-site service. A hammer and punch are all you need for virtually any service task, wherever you are.

Minimal parts inventory

In the TEX P60 and TEX P90 only three parts are not interchangeable. One inventory will cover both breakers.

Reduced wear

The anvil block, a time-proven design, reduces wear on the piston and cylinder and helps to keep dirt out of the hammer mechanism. The block allows use

Air cushioning

TEX breakers feature air-cushioned piston return. Less vibration during hammering and dry firing reduces stress on the operator and the tool.

High power to weight ratios

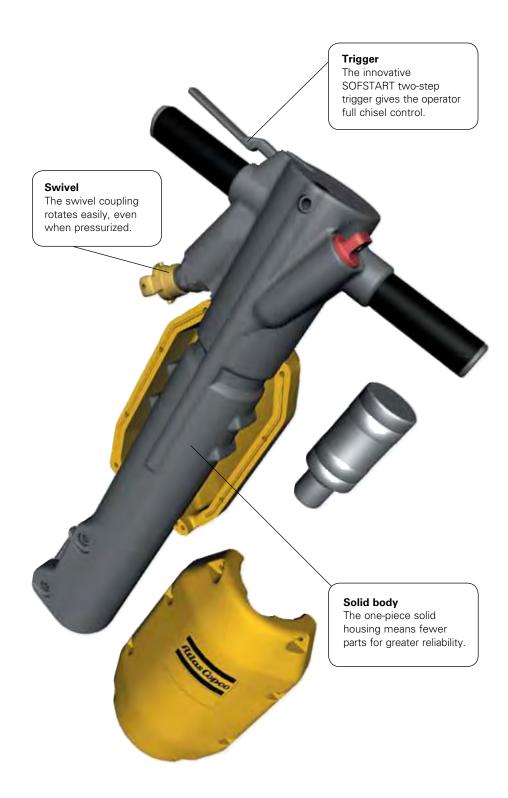

require less physical effort and less stress.

Noise reduction

The wear-resistant polyurethane silencer cuts noise emission by up to 75 % (as compared to the same breaker without noise reduction, ISO 3744). Its slim profile lets the operator see the chisel point and work-piece.

Full-shift lubricator

A built-in lubricator ensures efficient lubrication for minimum tool wear. The lubrication system is designed for easy access; either mineral or synthetic oils and enough capacity for an entire shift.

Pneumatic Breakers that Deliver Sustainable Productivity-TEX PE Series

Highly efficient silencing and vibration dampening systems make TEX PE breakers comfortable to operate and the most productive choice for demanding jobs. The ergonomic design of the TEX PE series breakers equipped with HAPS® (Atlas Copco's Hand-Arm Protection System), means they can be used for prolonged periods with minimum risk to the operator's health.

Atlas Copco's HAPS® system

By reducing the in-use vibration value of the breaker, Atlas Copco's HAPS system decreases the negative effects of harmful vibration at a given trigger time. The PE series pneumatic breakers allow up to 7 times the trigger time of conventional fixed-handled tools at a given level of operator vibration-exposure.

Sustainable Productivity in a Breaker

... is the result of design, engineering and manufacturing precision. The result is a pneumatic breaker series that delivers performance and reliability; operator safety and comfort; ease of use and maintenance. Not only are the TEX P60 and TEX P90 among the most powerful in their class, but they are also the most reliable.

Power

The TEX breakers were designed for contractors who rank hitting power and productivity at the top of their must-have check list. The P90 has the largest hammer piston in the industry, more than 15% heavier than its nearest competitor. The P60's high blow frequency makes it ideal for cutting asphalt and concrete.

Control

This power is easy to control because of the exclusive SOFSTART two-step trigger. The operator can begin to hammer slowly, setting the chisel where it's needed –no wasted effort.

Handling

With their low center of gravity, these breakers are well balanced and easy to handle. A unique swivel coupling, which rotates even when pressurized, makes the TEX breakers easy to maneuver.

Noise Control

The muffler, available as an option, significantly reduces the noise level. Its slim design gives an unrestricted view of the work for maximum control.

Pick Hammers Low weight – high productivity...

The TEX 09 and 12 series pick hammers are one of the lightest and most productive medium-weight tools in their class. They are fitted with D-type handles,

...with the reliability you need

TEX 09 and 12 pick hammers, available in a variety of models, are made to go on giving the same high level of performance under the toughest conditions, delivering **sustainable productivity**.

The TEX 12 is versatile tool in the Atlas Copco pick hammer line up. It combines high productivity with low weight to make it a champion in the medium-weight class.

Historical reliability and state of the art technology are combined then designed and built into every tool. The SOFTSTART two-step trigger feature lets the operator start slowly with full control over the chisel starting position and placement.

Chipping Hammers Sized right for the job

TEX 3 and 05 are the ideal choice for a wide variety of lighter chipping and scaling jobs. They are particularly suitable for renovation and structural alteration work, including chipping concrete, roughening surfaces, making holes, chasing and trimming a variety of materials.

Rivet Busters

Fitted with "D" type handles, the TEX 626, TEX 830 and 1133 rivet busters are tough, powerful tools designed for heavy demolition work. Their long stroke and high impact energy, coupled with the ergonomics of the rivet buster valve, make them ideal for extended demolition use.

Backfill Tamper

The TEX 640 backfill tamper is designed to efficiently and effectively compact loose backfill material around utility poles and foundations as well as backfilling trenches and road repairs. The High frequency of blows per minute means that base material is compacted quickly and efficiently.

The TEX 640 features a built-in lubricator that allows for the correct amount of oil during operation. An adjustable packing nut allows for proper re-adjustment as the packing set wears.

Ergonomic Scaler

Ruggedly built, the TEX 117 is a low maintenance, long reach scaler perfect for many surface-cleaning operations. Using a variety of standard accessories, the operator can chip concrete, grout, caulking or remove tiles, mastic, paint and roofing materials. The ergonomic long reach scaler reduces time-consuming hand scraping and back breaking labor; it is economical to use, consuming only 7 cfm, and can operate from a small portable compressor.

Rock Drills

Improved safety – sustainable productivity

The ergonomically designed BBD 15E and RH 572E, medium-weight rock drills with high power-to-weight ratios, provide maximum operational safety and productivity. These low maintenance drills deliver high impact energy in relation to weight, and have ergonomic features that improve operator comfort and safety.

Reduced noise and vibration

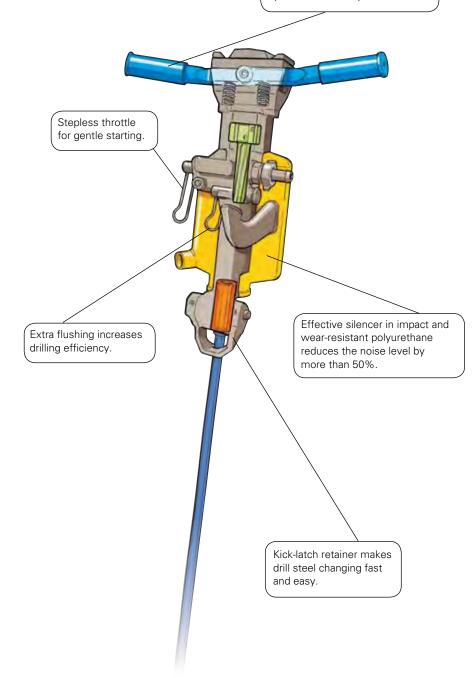

The BBD 15E and RH 572E are equipped with spring-dampened handles that reduce vibration transmissions to the operator's hands by more than 75%. Sound suppressors reduce low-frequency noise levels by 7 dB(A) – more than 50%. The combination minimizes operator fatigue and raises productivity.

Fit the need

The RH 572E features rifle-bar rotation, a slower rotation and lower impact frequency for drilling in hard rock. This drill is ideal for minor bench drilling and other rock drilling applications.

The lighter BBD 15E has ratchet-wheel rotation, with faster rotation and higher impact frequency, for drilling in soft to medium-hard rock. The BBD 15E is designed for concrete drilling, drilling for smooth blasting and seam drilling – all applications that demand a high-performance, lightweight, easy-to handle drill.

Spring-dampened handles reduce the vibration transmitted into the operator's hands by 75%.

Light Rock Drills

Power and Handling

The lightweight BBD 12 hand-held rock drill is the perfect partner in a wide variety of applications where maneuverability and easy handling are important. Available in two models, one for horizontal drilling and one for vertical-down drilling, the BBD delivers powerful, reliable and flexible operation.

Equipped with a D-type handle, the BBD 12D is ideal for horizontal drilling, plug hole drilling, and drilling in concrete to a maximum depth of 3 feet.

For vertical-down drilling to 10 feet in depth, Atlas Copco offers the BBD 12T, with slightly-angled T-type handle, to provide the best grip. The BBD 12T is perfect for concrete drilling, drilling for smooth blasting, and seam drilling. All BBD models are equipped with kicklatch type drill-steel retainers for safe, quick and easy steel changes.

²) Drilling in granite with 1-1/4", chisel-type integral drill-steel (working at 90 psi)

Lightweight Drill/Chipper

Light, versatile, productive

The DKR 36 is a lightweight, versatile machine designed for use on construction sites and in stone-cutting shops.

This powerful, compact drill/chipper is the perfect choice for drilling plugholes from 5/16" to 1-1/8" in diameter and up to 12" in depth in concrete floors, walls and roofs for pipe cable and ventilation duct installations. The DKR 36 is also used in drilling wedge holes for rock splitting.

Chipping and scaling

The DKR 36 is also a highly efficient tool for general chipping and scaling work. Changing from drill steel to a chipping tool automatically switches the tool to the chipping function.

The DKR 36 has a built-in lubricator for easy maintenance, and a quick-coupling hexagonal or cylindrical chuck that makes tool changes safe, quick and easy.

Medium-weight Rock Drills

Power that's easy to handle

The RH 571 and RH 658 rock drills compact, versatile designs make them easy to position and handle. High penetration rates get the job done quickly delivering maximum productivity.

RH drills are designed for bench drilling, secondary drilling, and drilling for smooth blasting. The RH 571 lighter weight makes it the right choice for smaller jobs. The more powerful, and slightly heavier RH 658 provides a higher drilling rate and can handle depths up to 20 feet.

Design features

The extra flushing air valve is a special feature that provides simple, rapid cleaning of the drill hole for maximum productivity. Changing drill steel is safe, quick and easy. They are designed with a robust kick-latch type retainer that quickly and easily locks the drill steel into position.

Both drills have rifle-bar rotation, with slower rotation and high impact energy, making them the right choice for drilling in hard rock. They are also equipped with T-handles for a solid, comfortable grip.

Pusher Leg Rock Drills and Stopers

Real value, top quality

As soon as you pick it up, you'll feel the quality. It's solid, well made. Start it up and you'll notice the power.

You'll appreciate the real advantages of an Atlas Copco rock drill. Each and every part is made to the highest tolerances and of the very best materials. This means that even when you replace a part, your drill will deliver the same level of performance as when it was brand new. Time after time. Year after year.

How long does an Atlas Copco rock drill last? Let's just say that by the end of its service life you'll have no doubt that it's given you real value for your money.

Stopers

BBD 46WS/WR - Falcon

- Suitable for production drilling, raise driving and bolting in soft to medium hard rock
- Short stroke, good penetration rates
- Large piston diameter gives high efficiency even at low air pressure
- Ratchet wheel rotation mechanism
- WR version with clockwise rotation for tightening nuts and roof bolting

Pusher Leg Rock Drills

BBC 16W - Puma

- All-round rock drill, suitable for most drilling applications in medium to hard rock
- Long stroke, good penetration rate
- Robust rifle bar rotation mechanism
- Pusher leg control placed in back head of the rock drill

BBC 34WTH

- Highly efficient in medium to hard rock
- Long stroke, high impact energy
- Large piston diameter makes it very efficient even at low air pressure
- Powerful rifle bar rotation mechanism
- Pusher leg control placed in NEW throttle handle

BBD 94W - Panther

- High performance rock drill for soft to hard rock
- Short stroke and high impact rate makes it ideal for soft rock
- Large piston diameter for high efficiency even at low air pressure
- Ratchet wheel rotation mechanism
- Pusher leg control is located on the pusher leg

RH 656W

- Suitable for soft to medium hard rock
- Good ratio between high penetration/low air consumption
- Due to low weight, it can also be used as a sinker.
- Supplied with T-handle
- Rugged rifle bar rotation mechanism
- Pusher leg control is located on the pusher leg

Air-powered pumps –for safe handling of liquids under difficult conditions

Both clean and polluted liquids

Pumps used for both clean and polluted liquids in the construction, mining and process industries have to satisfy stringent demands for quality and reliable operation. They must be able to withstand difficult conditions.

Atlas Copco's air-powered pumps meet the strictest requirements. They are available in two basic designs, DIP centrifugal pumps and DOP diaphragm pumps. Both types share a number of advantages.

Robust

Air-powered operation ensures superior resistance to dirt, damp and impurities.

- Cannot be damaged by overloading
 An air-powered pump never runs
 the risk of damage from overloading.
- Suitable in all kinds of environments
 These pumps contain no electrical components which can cause sparks, and do not leak oil or need any inflammable fuel.

• Efficient

Air-powered operation gives very high capacity in relation to weight, which makes the pumps easy to transport and use in confined spaces.

• Simple design

Atlas Copco's air-powered pumps are of very simple design, which means simple handling, reliable operation and low maintenance requirements.

DIP centrifugal pumps

DIP centrifugal pumps are specially designed for relatively clean low-viscosity liquids such as water, cooling fluids, solvents, light oil or gas. A specially designed rotating mechanical seal prevents leakage.

- Flexible three pumps in one. A simple change of impeller and intake ring makes it possible to adjust to the desired capacity and head.
- Compact design and a high-output air motor give the DIP pumps very high capacity in relation to gas and electric motors of the same weight.
- Submersible with a non-return valve (optional) mounted, or alternatively a hose connected so that the air outlet is above the surface.

With a strainer at the base that prevents larger particles passing through the pump and which gives the pump good stability.

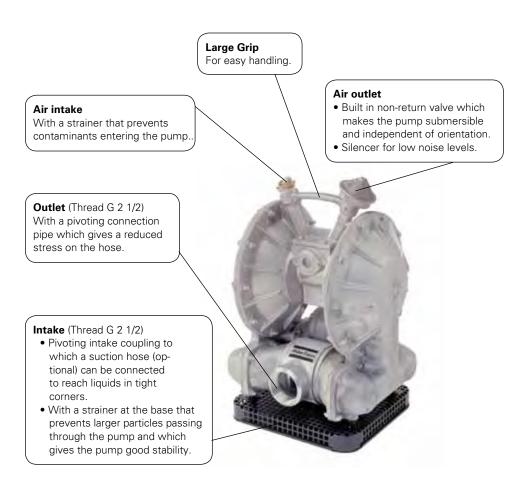

DOP diaphragm pumps

DOP diaphragm pumps are designed for the most polluted and viscous liquids, as well as highly abrasive and inflammable fluids.

DOP 15N - an all-round pump for construction, mining and industrial applications. The diaphragm and valve flaps are made of nitrile rubber.

DOP 15F - specially designed for the process industry, with fluorine (viton) rubber diaphragm and valve flaps.

- Can handle large solid particles up to 1-1/3 inch in diameter.
- Submersible
- Self-priming which means that unnecessary handling is avoided.
- Can be connected in series to increase the head.

X- LITE: 100 % safety and operating comfort

As compressed air application for demanding jobs, X- LITE pneumatic hoses offer a perfectly safe transfer of compressed air into the machines – at almost any working condition for professional drills and breakers.

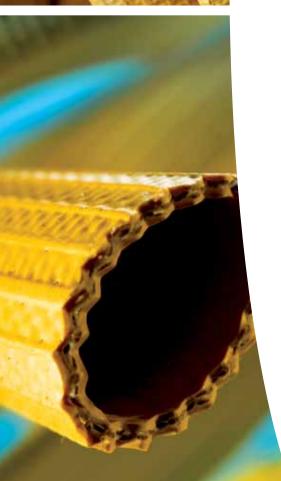

X- LITE stands for maximum operator comfort, as lightweight flat hoses are much more easy to handle than conventional heavy and bulky ones. With maximum safety included: Manufactured with a woven reinforcement, they remain extremely resistant to bursting or tearing during a long lifetime.

In addition, the X- LITE range offers customised versions – in order to identify company equipment clearly on the site.

VAM 5A Water separator

The VAM 5A is a heavy duty water separator for compressed airline systems in construction and mining applications.

By using a VAM 5A water separator together with Atlas Copco's range of AIR-OIL's and CLG/BLG lubricators - the customer will have optimum machine protection!

VAM 5A Features:

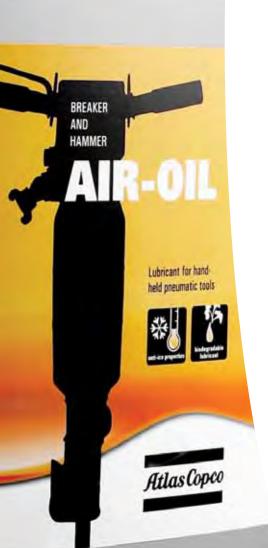

- Superior moisture protection and water removal.
- Dirt removal by centrifugal function.
- Large airflow capacity of 254 cfm,
- Can serve multiple pneumatic machines simultaneously.
- Robust design to withstand tough mining and construction applications.
- Easy to carry and low weight

VAM 5A Benefits:

- Reduced total cost of ownership
- Reduced product lifecycle cost
- More reliable machine operation
- Reduced maintenance
- Less machine corrosion
- Less freezing problems in ambient temperatures

Rock Drill Oil Lubricant for Atlas Copco pneumatic Rock Drills

Rock Drill AIR-OIL has been specially developed for Atlas Copco BBC, BBD and RH pneumatic Rock Drills. The development has been driven by high demands on environment and reliability.

Rock Drill AIR-OIL is a semi synthetic lubricant that increases machine reliability and service life by superior protection against machine wear and corrosion.

Improved machine reliability and service life

- High film strength that withstands heavy loads and safely protects components such as piston, cylinder, chuck drive, riflebar and ratchet wheel against wear and corrosion.
- Adhesion and larger drop formation contribute to the very good lubricating properties.
- Superior temperature range compared to other mineral oils.
 Works throughout the temperature range - 25°C to + 108°C

Environmentally adapted

- Based on > 90% renewable raw materials
- Readily biodegradable according to OECD301. This means that the biodegradability is over 60% within 10 days

Rock Drill Oil	Part No.
Air-Oil Rock Drill 1L (1 Quart) Or (0.26 Gal)	8099 0201 01
Air-Oil Rock Drill 4L (1 Gallon)	8099 0201 04
Air-Oil Rock Drill 10L (2.5 Gallons)	8099 0201 10
Air-Oil Rock Drill 200L (53 Gallons)	8099 0201 28

Breaker and Hammer AIR-OIL Lubricant for pneumatic Breakers and Hammers

A smooth continuous operation under extreme conditions is what the fully synthetic lubricant Breaker and Hammer AIR-OIL guaranties. It has been specially developed ATLAS COPCO TEX pneumatic breakers and hammers.

The oil is a fully synthetic lubricant with excellent lubricating, rust preventing and de-icing properties.

Breakers & Chipping Hammer Oil	Part No.
Air-Oil 5 Litre (1.3 Gallons)	8099 0202 02
Air-Oil 20 Litre (5 Gallons)	8099 0202 15
Air-Oil 200L (53 Gallons)	8099 0202 28
Air-Oil 1L (1 Quart)	8099 0202 36
Air-Oil 200Ml (7 Ounces)	8099 0202 40
