

Apollo 600 HP Supplied-Air Respirator

For use with compressed-air supply

IMPORTANT: for safe, efficient blasting, read and follow the owner's manual (23930) and seek training for everyone who will use this equipment.

OVERVIEW

The Apollo 600 HP is designed for use with compressed air. It meets OSHA standards for respiratory protection and air noise limitations. It protects the blast operator's head from rebounding abrasive and impact hazards. In addition, the Apollo 600's heavy-duty cape protects the operator's upper body from rebounding abrasive.

REQUIREMENTS FOR OPERATION

- A source of Grade D level (or better) compressed breathing air, as defined by the Compressed Gas Association specification G-7.1
- Sufficient volume of compressed air for breathing: 15 cfm at 65 to 100 psi when using ACV; or 20 cfm at 90 to 100 psi when using Clem-Cool, CAT, or CCT air-control devices.
- A breathing-air filter, such as Clemco CPF, to remove oil mist, moisture, particles, and odors
- Carbon monoxide monitor and alarm, such as Clemco's CMS-4.
- Protective clothing, and hearing and eye protection.

DESCRIPTION OF OPERATION

Incoming air enters the system through the air control device on the operator's belt. It continues through the breathing-air tube to enter the helmet at the inlet fitting at the center rear of the helmet crown. An air-distribution channel guides air over the head to the operator's face. The incoming air to the respirator system maintains positive pressure inside the helmet. Exhaled air exits through the knit collar, which must fit snugly around the operator's neck. All helmet features work together to protect the operator from exposure to harmful dust and abrasive.

The Apollo 600 configures with the following Clemco air-control devices:

- Constant-Flow Connector (CFC)—fixed air flow
- Air-Control Valve (ACV)—adjustable air volume
- Clem-Cool or Cool-Air Tube (CAT)—cools incoming breathing air
- Climate-Control Tube (CCT)—heats and cools incoming air

All breathing-air valves have minimum and maximum flow points, as specified by NIOSH.

A flexible breathing tube maintains air flow between the inlet fitting on the operator's belt and a replaceable inlet fitting at the center rear of the helmet crown for maximum operator comfort and maneuverability.

DESIGN ADVANTAGES

- Two suspension options: web-style or DLX comfort-fit style
- Expansive, 180° full-view window
- Multi-lens system with rugged, positive-latching window frame
- Built-in mini visor prevents media ingress between lenses
- User-friendly cape attachment system
- Zip-in-and-out washable inner collar
- Replaceable inlet fitting
- Generous interior dimension allows supplementary hearing and eye protection

APPROVALS AND CERTIFICATIONS

- NIOSH-approved Type CE continuous flow supplied-air respirator
- NIOSH approval no. TC-19C-130
- OSHA Assigned Protection Factor: 1000 x PEL for hazardous substances
- ANSI Z89.1-2003 Type 1, Class G protective helmet (hard hat)
- ANSI Z 3.19: Noise Reduction Rating— 8 dB (with web suspension), 9 dB (with DLX suspension)

NOTE: Prior to use, ensure that the Apollo, type CE, supplied-air respirator is appropriate for your specific blasting conditions and requirements.
